Stainless Steel & Brass Wire Cloth

Materials:

SUS302、304、304L、316、316L , brass wire, Phosphor bronze wire and copper wire.

Specifications:

Square opening series: from 1mesh to 1600mesh

Dutch woven series: from 12x62 to 400x2800 mesh

Woven patterns:

Plain weave, Twilled weave, Plain Dutch weave, Twilled Dutch weave, Reverse Dutch weave

Plain Weave/ Twill Weave

Plain Square - The most common weave, with the same diameter warp and shute wires woven in a simple over and under pattern. It produces screen with the same mesh count in both directions.

Twill Square - Each shute wire typically passes over two warp wires and under two, producing square openings. Twill weave can be made from larger diameter wires than would be possible in plain square weave to obtain greater strength, density, or corrosion resistance.

Sky Mesh Group

Factory direct high quality wire mesh and filtration products

Dutch Weave Patterns

Plain Dutch Weave Pattern

Plain Dutch - Woven in an over and under pattern, but warp wires are heavier -- larger in diameter -- than shute wires which are driven very close to create a high density wire mesh with much lower flow rates and much higher particle retention than plain square weaves.

Stainless Steel Dutch Plain Weave

Twill Dutch - Similar to Plain Dutch except woven in the Twill Style. Each wire passes over two wires then under two wires, still utilizing a smaller-diameter shute wire, allowing an even tighter weave and even finer filtration than Plain Dutch Weave.

Sky Mesh Group

Factory direct high quality wire mesh and filtration products

PVC, Teflon Coated Wire mesh

We serve various plastic coated wire meshes. Coating materials include Teflon, PVC, PE, PP. PVC coated welded wire mesh offers strong adhesion and corrosion resistance.

Material: Made of superior mild steel wire, stainless steel wire, aluminum alloy wire, epoxy coated after plain weaving or welding. A variety of colors for your choice.

Features: Light weight, good flexibility, corrosion and oxidizing resistance, easy cleaning, bright and environmental friendly.

Application: Epoxy coated wire mesh products are mainly used in liquid and gas filtration, grading of particles, insect screen etc.

Welded PVC coated mesh

PVC coated steel wire application in air filter

Description PVC Coated Welded Wire Mesh		
Opening		Wire Diameter(BWG)

Filter Leaf

Filter leaves are designed for batch operation in high flow rates and low solids removal with applications up to 6 wt% solids loadings, depending upon application. All units provide maximum filtrate clarity. Two kinds of filter leaf are available to suit your process requirements:

- Metal Screened Filter Leaves
- Polypropylene Filter Leaves for low temperature or corrosive applications

Sky Mesh Group also provides full filter system including vessels, agitating tanks and accessories.

* Three layers Tubular Slit Metal Screen Filter Leaf are constructed with

- *Drainage layer* - 1 layer of tubular slit mesh
- *Filtration Media* - 2 layers of screen

** Three layers Mesh Metal Screen Filter Leaf are constructed with

- *Drainage layer* - 1 layer of mesh
- *Filtration Media* - 2 layers of screen

*** Five layers Mesh Metal Screen Filter Leaf are constructed with

- *Drainage layer* - 1 layer of mesh
- *Drainage and support* – 2 layers of mesh
- *Filtration Media* - 2 layers of screen

Vertical Pressure Leaf Filters have found wide application for:

- Food & Beverage
- Pharmaceutical Industry
- Wastewater
- Chemical Industry
- Petrochemical Industry
- Rendering
- Chlor-Alkali
- Cooling Water
- Electroplating Industry
- Biologically Active Suspensions

Self-cleaning Candle Filter and Elements

Area series (M ²)	Tube body diameter (mm)	Working pressure (MPa)	Operating temperature (°C)	Nominal filter precision (µm)
0.25 - 100	300, 400, 500, 600, 800, 1000, 1200, 1400, 1600, 1800	0.4	120	1, 5, 10, 15, 25, 40, 50, 65, 75, 80, 100, 120, ...

Sky Mesh Group also provides various filters including:

- * Automatic plate type hermetic filter
- * Vertical leaf filter
- * Horizontal leaf filter
- * Multifunctional filter
- * Bag filter
- * Horizontal paper plate filter
- * Candle filters

Pleated Filter Elements

Filter media for Pleated Filter Elements are stainless steel sintered fiber web and stainless steel weaving wire cloth.

Stainless Steel Sintered Fiber Web is a kind of durable and pleatable 316L stainless steel medium, sintered into a graded pore structure, enjoys the advantages of high porosity rate, more filtration area, high dirt holding capacity and can be repeatedly used.

Stainless Steel Woven Wire Cloth is made by weaving of stainless steel wire in a variety of diameters. Filter elements with stainless steel woven wire cloth as filter medium, enjoy such advantages of good strength, fastness, easily cleanable, heat-resistance and economic cost.

Pleated Filter Elements mainly serve in filtration of high molecular polymer, long fiber, short fiber, meltdown in thin film production, also drugs, hydraulic oil, disposal of water, hot gas, etc.

Disc Filters

Filter Media: Filter medium for Disc Filters is multi-layer sintered wire cloth, with a rating range from 0.5 to 200micron, in a diameter from 200mm to 3000mm. Disc filters with multi-layer sintered wire cloth as filter medium, enjoy good strength, accurate filter rating, long life-span and repeatedly cleaning.

Materials: Standard material of disc filters is SUS316L. Other metals like Nickel alloy or Titanium alloy are also available at customers request.

Application: Disc filters are ideal filter fittings for three-in-one filtration (filtering, washing and drying) in pharmaceuticals, food, chemical industries and polymers. Disc filters work as a complete unit or in parts.

Disc Filters II

Leaf filter is mainly used in filter devices of high viscosity melt for removing of hard impurities. The materials are stainless steel sintered web and stainless steel sintered wire mesh. Leaf filters can be repeatedly used and repeatedly cleaned.

Filter Packs and Basket

Double layer PS wire mesh disc

Plain steel wire mesh

Stainless steel mesh disc

Filter Media: Filter media for Filter Cloth Packs include stainless steel sintered fiber web, stainless steel weaving wire mesh, phosphate copper wire mesh and copper wire mesh.

Shapes & Lining: Filter cloth packs can be single or multi-layered. Filter cloth packs come in different shapes, including round, square, oval and kidney-shaped. Lining material can be aluminum, stainless steel, nickel coated copper, etc.

Application: Filter Cloth Packs are mainly used in filtration of polyester film and spinning in chemical fiber industry.

Filter Cloth Packs

Basket filters

Filter Media: Filter media for basket filters include stainless steel perforated sheet, stainless steel weaving wire mesh and stainless steel sintered wire cloth. As to external dimensions and filter rating, we may also provide products per customers requirements.

Application: Basket filters are mainly used in such industries as petroleum, chemical industry, food, beverage, water treatments, etc.

Filter Cloth

We offer a full range of non-woven, woven and felted synthetic filter cloth including: woven constructions of monofilament, spun, multifilament, combination yarns and needle felts with various surface finishes. Weave designs, fibre choice and special finishing techniques are used to enhance the filtration and cake release characteristics of our materials.

Fiber Material

PA6, PA6.6, PA11, PP, PET

Benefits

high dimensional stability good
abrasion resistance clogging
prevention smooth surface
excellent cake release

Applications

belt filter
filter press
vacuum pan filter
leaf filter
rotary / horizontal disc filter
rotary drum vacuum filter
centrifuge filter

Monofilament Filter Cloth

Monofilament filter cloth is made from monofilament yarn. Benefit from its excellent performance, it has been widely used for industrial solid/liquid filtration.

Liquid Filtration and Dust Collector Filter Bag

Liquid Filter Bag

Liquid filter bags are widely used as the filter media in applications of liquid filtration. They are produced of fabrics, needle felts and nylon mesh in different fineness according to your filtration process. We can provide custom bags to meet your specific requirements. Our product lines mainly include: Felt Filter Bag and Mesh Filter Bag

Dust Collector Filter Bag

Dust collector filter bag provides a cost effective solution for many industrial operations. It is highly versatile and efficient in dust and fume collection.

We provide a wide variety of filter bags for use mainly in the following types of dust collectors: Pulse Jet Dust Collector, Reverse Air Dust Collector, Mechanical (Shaker) Dust Collector and Baghouse Dust Collector.

Mesh Filter Bag

Mesh filter bags are constructed with woven fabric. Whether your application requires a monofilament mesh that provides extra strength with no fiber migration, or a multifilament mesh designed for low-cost, disposable bags, we have your needs covered. Material available: nylon monofilament, polyester multifilament, polypropylene Monofilament. Micron rating: 10 to 1000; Collar type: steel ring, plastic ring or loop.
